PROFILE

Software Writer

Currently working and building full stack web applications with React, and Node. I'm willing to learn any tool.

TECHNICAL SKILLS & INTERESTS

→ JavaScript (React, Node)
→ Ruby on Rails

→ AWS
→ Python

PROJECTS

Crypto Portfolio — *Full Stack JavaScript Developer*

Developed an open-source platform to monitor your cryptocurrency portfolio. This allows you have to several portfolios, and different coins in a portfolio.

Environment: React, MobX, Hapi, MongoDB, SCSS, Webpack, Swagger

Classroom Mode — *Full Stack JavaScript Developer*

Contributed to open source though this project on the FreeCodeCamp repository where I Maintained both the frontend React and backend Node features. I participated in reviewing pull requests and helped others debug code. I helped mentor other developers and Eventually gained write access.

Environment: React, Express, MongoDB, and Jest

GiftCashing — *Full Stack JavaScript Developer*

The development consisted of an admin dashboard that provides admins with ability to manage gift cards and orders by being able to edit, sort and approve them.

Environment: NodeJS, ExpressJS, Mongoose, SCSS, Bower, gulp.js

EMPLOYMENT

SerpicoDEV — Contract Software Engineer   Oct 2018 - Present

In this role I've worked mostly as a support developer, and worked on an internal project. Highlights:

- → Internal Project that allows customers to login and see the team's activities in Teamwork with and project related documents that's uploaded to an s3 bucket. I was in charge of the backend development which I used Ruby on Rails.
- → Acted as a support developer where I participated in code reviews, and refactored existing code on other teams.
- → Research and provide documentation for a VC who was interested in investing into a company that offers an API. I had to judge the quality of the documentation, and API ease of use for other developers.

Tools: Ruby On Rails, JavaScript

Alio IT Solutions — *JavaScript Developer*   Oct 2016 - May 2017

In this role I've worked on a few project projects for the Alio's customer Claim Ruler. I worked on a CRM for an insurance platform. Highlights:

- → Worked on a Ad Hoc Report Builder with ReactJS as the frontend, I helped build SQL Queries based on input, and send data to the API endpoint (api gateway/lambda functions with python) where we process and build a Jasper Report (AWS SQS).
- → I worked on a team of two, and we created React Native Application. Specifically I worked on creating the login to work with an existing aws cognito user pool, setting up the React Native Navigation, and worked on building components.
- → I worked on a team of six, and we designed, and bootstrapped an Software as a Service CRM. Specifically I worked on a custom built Access Control to dynamically build the components. After that I was mainly in charge of translating the design from Sketch to the components.

Tools: React & React Native, Python, AWS API Gateway, AWS Lambdas

EDUCATION

2016 Free Code Camp — *Front End Development Certification* 2016

Free Code Camp Front End Development Program covers an estimated 500 hours of coursework that includes HTML5, CSS, JavaScript and jQuery. This is broken up with 10 basic, intermediate, and advanced projects. As well as 16 basic algorithms, and 21 intermediate algorithms were completed.
